Please AMEND claims 1, 6, 8, 10, 12 and 14 and CANCEL claims 5, 7, 9, 11, 13 and 15 in accordance with the following:

1. (CURRENTLY AMENDED) A method of managing control information in a control information management server that collectively manages control information for controlling control objects, the method comprising:
 - producing the control information in compliance with an instruction from a user;
 - collecting alteration information unknown to the user;
 - sending a message via email to a mobile communication terminal of the user;
 - altering the control information based on the alteration information in response to permission sent from the mobile communication terminal of the user responding to the message;
 - and
 - controlling a control object in accordance with the altered control information.
2. (PREVIOUSLY PRESENTED) The method as claimed in claim 1, wherein altering the control information comprises:
 - collecting alteration information;
 - requesting permission to alter the control information after notifying a user that the control information needs to be altered based on the collected alteration information; and
 - altering the control information upon receipt of the permission from the user.
3. (PREVIOUSLY PRESENTED) The method as claimed in claim 1, wherein controlling the control object comprises:
 - requesting permission to alter the control information after notifying the user that the control information be transmitted to the control object; and
 - transmitting the control information to the control object upon receipt of transmission permission from the user.

4. (PREVIOUSLY PRESENTED) The method as claimed in claim 1, further comprising notifying the user of an abnormal state of the control object, when no control information reception acknowledgement is sent from the control object after the transmission of the control information to the control object.

5. (CANCELLED)

6. (CURRENTLY AMENDED) A method of controlling a control object in a control object controlling device that controls a control object in accordance with control information, the method comprising:

receiving the control information altered based on alteration information, unknown to a user, for altering the control information on a transmission side, sending a message via email to a mobile communication terminal of a the user and altering the control information based on the alteration information in response to permission sent from the mobile communication terminal of the user responding to the message, after collecting the alteration information;

selecting a control object corresponding to the received control information; and controlling the selected control object in accordance with the received control information.

7. (CANCELLED)

8. (CURRENTLY AMENDED) A recording medium that can be read by a computer and stores a program for enabling a computer to perform an operation in a control information management server that collectively manages control information for controlling a control object, the program comprising:

a control information producing procedure producing the control information in compliance with an instruction from a user;

a control information alteration procedure collecting alteration information, unknown to the user, used for altering the control information, sending a message via email to a mobile communication terminal of the user responding to the message, and altering the control information in accordance with the alteration information in response to permission sent from the mobile communication terminal of the user.

9. (CANCELLED)

10. (CURRENTLY AMENDED) A recording medium that can be read by a computer and stores a program for enabling a computer to perform an operation in a control object controlling device that controls a control object in accordance with control information, the program comprising:

a control information reception procedure receiving control information altered based on alteration information, unknown to a user, after collecting the alteration information for altering the control information on a transmission side, sending a message via email to a mobile communication terminal of ~~a~~ the user, and altering the control information based on the alteration information in response to permission sent from the mobile communication terminal of the user responding to the message; and

a control procedure selecting a control object corresponding to the received control information, and controlling the selected control object in accordance with the received control information.

11. (CANCELLED)

12. (CURRENTLY AMENDED) A control information management server that collectively manages control information for controlling a control object, the control information management server comprising:

a control information producing unit that produces the control information in compliance with an instruction from a user; and

a control information alteration unit that collects alteration information, unknown to the user, for altering the control information, sends a message via email to a mobile communication terminal of the user, and alters the control information in accordance with the alteration information, in response to permission sent from the mobile communication terminal of the user responding to the message,

the control information management server controlling the control object in accordance with the control information.

13. (CANCELLED)

14. (CURRENTLY AMENDED) A control information management system that collectively manages control information for controlling a control object, the control information management system comprising:

a control information producing unit that produces the control information in compliance with an instruction from a user;

a control information alteration unit that collects alteration information, unknown to the user, for altering the control information, sends a message via email to a mobile communication terminal of the user, and alters the control information in accordance with the alteration information in response to permission sent from the mobile communication terminal of the user responding to the message;

a control information transmission unit that transmits the control information via a network;

a control information reception unit that receives the transmitted control information; and

a control unit that selects a control object corresponding to the received control information, and controls the selected control object in accordance with the received control information.

15. (CANCELLED)
